\$ 30.00 BASIC Lawn & Garden and Small Acreage Test

NO3-N, NH4-N, P, K, Org Mat., pH

*Please detach and submit the above with Soil Sample (s) and Payment

Basic Lawn/ Garden Sampling Techniques

- Use clean sampling tools
- Sample 0-6" depth a bulb planter will work, a Push probe, auger, or shovel also work well . If using as shovel see diagram for proper technique

- Sample each representative area, 6 inches for lawns, 12 inches for gardens. Deep rooting crops may require deeper depths at one foot increments
- Take 10 core samples for each sample to be submitted. Randomly sample throughout the lawn or garden and place in a clean bucket or container
- Thoroughly mix the core samples together and place (approx 2 cups) in sample bag
- Fill out soil Sample request form available above and label the sample bag with all pertinent information listed on sample form
- Keep bags cool and out of the sun and take to laboratory for analysis. (Refrigerate sample if unable to deliver within 4 hours)
